Abstract (en)
[origin: WO8502161A1] For wrapping in parallel or crosswise goods (28) on a palette (29) by means of a strip, an upper carriage (5) may be displaced in elevation against an upright (1). A vertical shaft (16) is mounted on the bracket (15) of the carriage (5). A horizontal portion (21) of a wrapping arm is secured under the hollow arm (16) and becomes a part (22) projecting perpendicularly downwardly. A strip reserve bobbin (19) is arranged either on the shaft or on the horizontal part (21) facing the vertical part (22). The strip (20) starts from the bobbin (19) and passes by return pulleys (23) through the horizontal part (21) and the vertical part (22) to arrive to the bracket (25) of a lower carriage (6). There is provided on said lower carriage a unit (24) to hold attached and cut the strip (20). Both carriages (5, 6) comprise separate units for height adjustment purposes.
