Abstract (en)
[origin: EP0163773A2] 1. Door for a coke oven with horizontal chambers, having an integral or multiple-part protecting shield combined with the body of the door, extending into the oven chamber, which also serves as a heat shield, above which the oven filling is maintained at a given spacing from the body of the door, whereby the body of the door, during the coking process, is pressed against the door frame of the oven with a bolting device, characterised in that at least one further integral or multiple-part shield is positioned between the protective shield and the body of the door.
