Abstract (en)  
[origin: EP0163974A2] The present invention relates to a device for spray coating workpieces with inks, consisting of two adjacently arranged conveying paths for the workpieces and in each case of an upper and lower spraying device which acts on the space between the two conveying paths, each spraying device consisting of spray guns which can be moved transversely to the material conveying direction. The essential feature of the invention is that the spray guns serving to coat the horizontal workpiece areas are complemented by the assignment of obliquely arranged additional guns for coating workpiece parts or carrier head parts located transversely to the conveying direction to form groups of spray guns.
