Abstract (en)
[origin: US4716631A] The pin incorporates a cylindrical body in which two sliding components are mounted, the two sliding components being intended to engage in lug holes or between the cheeks of a bracelet link or of a fastener. The sliding components have a threaded portion which is intended to be screwed into the lug holes so as to ensure locking of the pin. The cylindrical sliding components may either be held apart by a spring, or may be screwed into the tube.
