Abstract (en)

An electrical connector comprising a moulded synthetic resin body (11) housing a plurality of parallel terminals (13), a passage (15) extending within the body from one end wall (16) thereof, said passage (15) extending transverse to the length of said terminals (13), and, a locking bar (12) for insertion into said passage (15) from said one end (16) of the body, said locking bar (12) when fully inserted in said passage (15) cooperating with said body (11) and said terminals (13) to retain said terminals (13) in the body. A first latch device (27) is integral with the body (11) at the end wall (17) of the body opposite said one end wall (16), and a further latch device (27a) is latch device (27a) is positioned at said one end wall (16) of the body (11) when the locking bar (12) is fully inserted in said passage (15) and the latch devices (27, 27a) are arranged for co-operation with corresponding parts of a component with which said body (11) is engaged in use, releasably to retain said body (11) in engagement with said component.
