Abstract (en)
[origin: EP0165016A2] This invention relates to a vehicle window structure. The vehicle window structure includes a window glass (40), a body member (20), a window molding (50), a retainer (80) for the window molding (50) and a seal member (100) between the window glass (40) and body member (20). The window molding (50) is in contact with the window glass (40) and the body member (20). The window molding (50) is fixed on the retainer (80) which supports the seal member (100). Accordingly, the window molding (50), retainer (80) and seal member (100) are united to form a sealing assembly which is secured to the window glass (40) before the window glass (40) is fixed on the vehicle body (200). Further, the retainer (80) has an engagement portion (60) which can engage with the body member (20). Thus, the window glass (40) and its sealing assembly can be attached to the body member (20) in a simple one-step operation.
