Abstract (en)
[origin: EP0165809A2] A panel carrier for a panelled cladding or ceiling system formed of elongated sheet metal, the carrier extending generally transverse to the panels themselves which are also formed of elongate sheet material. The carriers are provided with projections which define first pairs of spaces of a relatively low height and second pairs of spaces of a greater height, the distance between the tips of the projections defining the open ends of these spaces in each instance being the same.
