Abstract (en)

[origin: EP0166012A1] 1. Holding device for back-ventilated structure facing with and U-shaped wall support (20, 21) and a profiled assembly rail for holding structure facing elements, whereby wall support (20, 21) consists of a base plate (22, 23) with two flanges (24, 25) being rectangularly arranged, between which flanges (34, 35) are vertically arranged at the holding plate (32, 33) of the assembly rail (28, 29, inserted adjacent to flanges (24, 25) and attached by means for screw or rivet mounting (15), characterized in that flanges (24, 25) of wall support (20, 21) are arranged on the base plate (22, 23) slightly tilted at a distance being smaller at the opening end section (36) than in the region of base plate (22, 23), that parallel surface sections (39, 40) are provided in the region of opening end section (36) at the internal surface (37, 38) of flanges (24, 25), that a surface section (44, 45) connected to surface sections (39, 40) is provided at free end sections (41, 42) of internal surfaces (37, 38) of flanges (24, 25) outwardly arranged and angled to the center axis (43), and that a depression (51) with a bearing-out end web (52) is arranged at the end sections (49, 50) of flanges (34, 35) of assembly rail (28, 29) being provided as butt girder (30) or central girder (31).
