Abstract (en)

[origin: EP0166099A2] The container has a housing (2), a storage space (V) and a tablet outlet opening which is arranged downstream of a sorting channel, the key being constructed as a two-arm swivel lever, one arm of which at its end facing the sorting channel moves the tablets into the discharge position and the other arm of which forms the actuation key. To simplify the shape, it is proposed to construct the double lever (3), swivelling inside the housing (2), as a hollow chamber, thus forming the tablet storage space (V) which is open towards the one broad side and is covered by the one side wall (4) of the housing, the swivel axis (5) being located on the rear side of the front wall (6) of the housing (2). <IMAGE>
