Abstract (en)

[origin: EP0166329A2] 1. Burner, particularly burner for the combustion of liquid fuel in the gaseous state, comprising a gasification chamber (11) formed by a housing (13), and a rotor (33) located in the gasification chamber (11), said rotor (33) being provided with blades (31) and capable of being driven by a motor (37), said gasification chamber (11) comprising inlet means (41, 43 ; 45) for fuel and air, a wall surface (12) capable of being heated electrically and/or by the flame of the burner for evaporating the fuel, and means (29) for discharging the produced fuel/air mixture, characterized in that the blades (31) of the rotor (33) extend radially to the proximity of the heatable wall surface (12).
