Abstract (en)

An apparatus (44) in which successive flexible sheets (48) are advanced from a stack (46) held with the sheets substantially-vertical. Successive outermost sheets from one end of the stack (46) are fed serially against gravity. The stack of sheets (48) is moved toward a sheet feeder (52) so as to position successive outermost sheets of one end of the stack in contact therewith. In addition, the stack holder (44) may be moved from an operative position, in which the sheets are in a sheet-feeding relationship, to an inoperative position for loading a new stack therein.
