Abstract (en)

[origin: EP0166978A2] 1. A device for actuating a door lock from the inside (1) for a motor vehicle, comprising a bearing block (6) which is mounted on an inside door panel (5), a two-arm operating handle (2) which is pivotably mounted on a shaft (14) of the bearing block (6), and a housing (7) which is supported on the bearing block (6) and which surrounds the operating handle (2), the housing (7) being held in position by means of a securing screw (10), characterised in that the operating handle (2) comprises a pivoting part (12) and a handle part (13), which is detachably connected to the pivoting part (12), and in that the securing screw (10) for the integrally formed housing (7) is arranged such that it is freely accessible when the handle part (13) has been removed, but is covered by the handle part (13) when the latter is in place.
