Abstract (en)  
[origin: EP0167044A2] In an intelligent card, a keyboard (12) has numeric keys (12A) for entering identification data and a collation execution key (12C). A solar cell (40), a display device (13) and an IC chip for performing arithmetic operations and card identification are incorporated in a case (20). The IC chip includes a nonvolatile memory for storing predetermined identification data. The predetermined identification data is compared with the input identification code entered at the keyboard (12) upon operation of the key (12C), thereby performing card identification.
