Abstract (en)

[origin: EP0167048A2] An explosive gas, dissolved in a solvent, is stored under pressure in these bottles. So that a device can be specified which enables bottles stored in the open air to be safely emptied, but the cost of which is comparatively low, it is proposed to surround the bottles with a jacket in the area of the bottle flanks, the jacket ending in the area of the bottle shoulders so that the latter are exposed.
