Abstract (en)

[origin: EP0167678A1] A sliding clamp for fastening the binding prongs (7) of a binder having flexible binding prongs, which is adapted to slide in a rail-shaped member (3) of substantially U-shaped cross-section, which is fitted with openings for the passage of the binding prongs (7), wherein the sliding clamp comprises a first elongate portion (21) adapted to slide in the rail-shaped member (3) and which is provided with a passage for a binding prong (7); and a second portion (24) pivotally connected to the first portion (21), said second portion (24) being adapted for pivotal movement in a pivoting line extending transversely to the longitudinal direction of the first portion (21), and that there are provided cam (28) means for being locked in a position wherein the binding prong (7) is bent and clamped.
