Abstract (en)

[origin: EP0167991A2] Provided in this pivot head arrangement is a strut receptacle which is firmly connected to the sheeting wall and forms a space between at least two wall sections arranged at a distance from one another. A strut head extends into this space. The strut is released from the sheeting wall by separating the strut head and the strut receptacle in the area of the pivot pin. In order to pretension the strut in its desired horizontal position, a spring element is provided between the strut and the sheeting wall.
