Abstract (en)  
[origin: WO8503274A1] Multiple package for a certain number of cylindrical containers (101) standing next to each other at least in two longitudinal rows, of identical shape and size. The envelope of the multiple package is comprised of a rectangular cardboard part (110) having the shape of a band provided with transversal folding lines. The band-shaped part defines a bottom surface (111) and two side or end wall surfaces (112, 113) arranged facing each other, back-foldable upwardly and attached to the bottom surface, of which the height is equal to or smaller than the height of the containers. A surrounding band (125), traversing the side or end wall surfaces back-folded upwardly as well as the two uncovered sides of the multiple package approximately half-way up of the containers, is the sole means both to keep the containers together and to carry the multiple package with one hand or both hands.
