Abstract (en)
[origin: EP0168725A2] 1. A method of laying over an obstacle a bridge more than around 40 m long made of several bridge sections and a launching carrier composed of several sections, in which first of all the individual sections of the launching carrier are connected to each other on the near bank and this is launched to a bearing point, and the bridge sections connected to each other are then pushed along the launching carrier, characterised in that beyond the middle or the obstacle a support (8) is erected, in that the support (8) is used as a bearing point for the front end of the launching carrier (18), and in that the bridge sections (32) without a launching carrier (18) are pushed out over the support (8) across to the opposite bank (4).
