Abstract (en)

1. Removal device for use in splitting machines for hides, characterised in that it comprises a wedge (1) disposed immediately downstream of the machine (11) to lift the hair side of the hide as far as a conveyor line (2) which removes it from said machine with the aid of series of free-running toothed drums (12, 13) suitable for keeping the hides pressed against the aforesaid line and conveying them to a receptacle (6), thereby enabling automation of the operations of stacking the hides in said receptacle.

Abstract (fr)

Le dispositif d'évacuation comprend un tapis transporteur (2) disposé en aval du coin (1) qui amène la fleur des peaux renfendues par la machine qui précède. La fleur est maintenue sur le tapis (2) par des tambours (12, 13) et elle tombe sur un second tapis transporteur (5) qui les dépose dans un caisson (6) en formant une ou plusieurs piles. On réduit ainsi de manière très sensible la main-d'oeuvre et on élimine la fatigue physique des opérateurs.
