Abstract (en)
[origin: US4681339A] A ski binding part, in particular a front jaw, having a guide rail adapted to be fastened to the upper side of a ski and on which is arranged a jaw unit movable in a longitudinal direction of the ski and is secured on a base plate. A housing is provided and a locking mechanism for locking the jaw unit in predetermined sliding positions on the guide rail. The locking mechanism has a locking part which is movably held on the jaw unit and which can be moved by a spring into a form-locking engagement selectively with a complementary locking recess on the guide rail. An operating member is adapted to engage the locking part for effecting a disengagement of the locking part from the complementary locking recess. The operating member is supported on the locking part and is provided with at least two surfaces defining an angle with one another and of which each lies at a different distance from a support point and thus determines the engaged or disengaged position of the locking part. The two surfaces are held pressed on the housing in these positions selectively by the spring.
