Abstract (en)

[origin: US4721294A] The webs of printed material 1a, 1b printed in a printing machine are assembled in the desired manner, after being previously cut, via various deflectors (e.g., 12, 17, 18, 23, 24, etc.) and are optionally provided with inserts or wrappers which have been cut to size and come from rolls (40, 41). After braking has been effected in braking stages (e.g., 37a-37h), the fold is formed on folding tables (38a-38h). The folded products can be assembled in any desired manner on collecting tables, after which they are either paid out below the collecting tables (39a-39h) or combined with further folded products (FIG. 1).
