Abstract (en)  
[origin: EP0169499A1] 1. A cardboard box including a cover constituted by an inner flap (2) and an outer flap (3) intended to be superposed, the inner flap including at least one opening (11), the outer flap including, in its region overlying over said opening, a cut-out providing two tongues (21, 22) whose root segments (23, 24) situated adjacent to two corresponding sides (12, 13) of the opening are of substantially the same width as the said sides, each tongue having a region of greater width than said sides running parallel to said root segment, characterized in that the opening in its inner flap (2) is substantially in the form of two facing trapeziums having a common axis of symmetry (10) constituted by the common short base of the two trapeziums, and in that the tongues of the outer flap (3) are symmetrical about an axis of symmetry (10') corresponding to the axis of symmetry of the trapeziums of the opening of the inner flap.
