Abstract (en)

[origin: US4710143A] A paddle-driven watercraft formed as a single closed shell with a hull and deck. The seat-forming recess is bounded toward the rear by a rim and a central rise or prominence extends forwardly and upwardly to a level above the rise in the deck to define a pair of platforms forwardly of the seat on which the user can kneel, and at the forward ends of these platforms with respective footrests. The platforms are laterally unconfined outwardly so that the seat platforms and footrests prevent accumulation of water.
