Abstract (en)
A cuboid packing box is formed by a net of six linked panels (10 ... 15) in T-formation. Each panel has an outer layer of card which is common to all, and an individual tile, with mitred edges, of an expanded plastics material. The end panels have lips (21) and close over the four walls. The tiles on adjacent panels have a distinct spacing when flat which ensures accurate closing of the box.
