Abstract (en)
[origin: EP0494099A2] Method of reinforcing a wall using a structural tie in the form of a length of wire (15) of corrosion resistant material, comprising a core and two externally projecting fins (4). Each fin follows a continuous helical path about the axis of the core and the tie has a substantially uniform cross-section. The diameter of the core is 2 to 6mm and the maximum diameter of the entire tie is 10mm. The tie is located in an opening formed in the mortar layer of the wall and grouted in position. <IMAGE>
