Abstract (en)
The novel transparent sheet contains at least one authenticating retroreflective image, each image being viewable from the front of the sheet, but only across a cone which preferably is less than 90 DEG . The novel sheet may be adhesively bonded over information areas of a document for authenticating purposes. When such an authenticating image is viewable only from an angle appreciably different from angles at which the document is ordinarily viewed, the image is obscure in that users of the document will notice the authenticating image only when confirming the authenticity of the document. Usually each authenticating image is viewable only across a cone of about 10 to 20 degrees.
