Abstract (en)

1. A method of laying tiles (11, 30) or flooring slabs (10) of ceramic material, earthenware, sandstone or the like to provide a floor covering on a slab floor or boarded floor (19) in which : - on the slab or boarded floor (19) there is placed a moquette, a needleloom carpet, a composition carpet or the like forming a backing and sound insulating layer (18), - on this layer are laid the said tiles (11, 30) of ceramic material, earthenware, sandstone or the like which comprise mutual interlocking means such as at least a tongued portion (16, 31) and/or a grooved portion (17, 32) corresponding thereto, the tongues (or grooves) of one tile engaging in the grooves (or on the tongues) of the adjacent tiles, while leaving around the periphery of the surface to be covered, bordering on the walls (20) which bound the said surface, a strip of a certain width (1) which is free of tiles, - a counter-plinth (21) of wood, plastics material, agglomerate or other similar material is positioned and fixed in this strip, the said counter-plinth comprising on its edge which is towards the laid tiles, locking means such as a tongue or a groove (22) which are shaped in such a way as to engage into or over the aforesaid tile locking means, such as the adjacent grooves (17, 32) or tongues (16, 31) on the tiles against which it bears and locks it.

Abstract (fr)

L'invention concerne un procédé de pose de carrelage en revêtement de sols. Sur une dalle support (19) on place un tapis d'isolation phonique (18) sur lequel on dispose une couche de carreaux (11) comportant des moyens de verrouillage mutuels (16, 17) sur leurs tranches, et on ceinture le carrelage par des contre-plinthes (21) comportant des moyens (22) de verrouillage des tranches du carrelage. L'invention s'applique à la pose essentiellement à sec de carreaux relativement lourds.
