Abstract (en)

[origin: WO8503447A1] The applicator (1, 2) is made of flexible synthetic material so as to be easily adapted to the shapes of the surfaces of the body to be treated. To improve the application of creams and the like, an electric ohmic heating (4) is housed into the applicator (1, 2). In order to provide for a thermostatic self-regulation, said electric ohmic resistance (4) is either entirely comprised of a ballast resistance or a ballast resistance is mounted in series with heating resistances known per se.
