Abstract (en)
[origin: EP0171512A1] 1. Air outlet with a cylindrical perforated shell (1), an air entry nipple (2) and a closed base (3) lying opposite the air entry, wherein several interconnected baffle rings (5) are arranged at an axial spacing one from the other in the interior of the shell (1) and have opening cross-sections which reduce in direction towards the base (3), characterised thereby, that the baffle rings (5) are connected with a setting drive and displaceable in longitudinal direction of the shell (1) by the setting drive.
