Abstract (en)
[origin: EP0171527A1] 1. Centrifugal vibratory grinding machine having a container (17) which serves for the machining of workpieces, is carried by a main frame, and has an approximately circular ground plan, and whose bottom (32), which is offset in height in relation to the container, rotates about the vertically extending longitudinal axis of the container and leaves a dividing gap (S) in relation to the stationary container, characterized by adjustability of the dividing gap to a predetermined size.
