Abstract (en)  
[origin: EP0171685A1] 1. Ski boot a) consisting of a shell (1) made from rigid plastic and an inner boot (2) made from elastically deformable material in which the shell (1) contains a main shell body (3), a shell tongue (4) hinged in the front region of the main shell body (3) and a spoiler (5) hinged in the heel region of the main shell body (3) in hinge spindles (8, 9), and the inner boot (2) is of undivided construction at least in the region of the area surrounding the heel, b) in which at least one traction element (10 ; 10a, 10b ; 10') which is passed through slots (11, 13 ; 11', 13') in the main shell body (3) to the hinge spindles (8, 9) of the spoiler (5) is connected to the shell tongue (4), c) and in which the upper regions of the shell tongue (4) and the spoiler (5) can be connected to one another by a closure (7) on the leg of the boot, d) and in which the shell tongue (4) can be pivoted only by a limited angle with respect to the main shell body (3) for the purpose of stepping backwards into the ski boot, characterized by the following feature : e) the traction element (10 ; 10a, 10b ; 10') is passed from a central region of the shell tongue (4) over the hinge spindles (8, 9) of the spoiler (5) and back to the central closure (6) and connected at both its ends to the central closure (6).
