Abstract (en)

[origin: EP0171776A2] The invention relates to a coloured rod, in particular a round rod, made of transparent plastic material, optionally coloured with a fluorescent dye, in particular acrylic glass. The object of the invention is to design the material of the rod in such a manner that its light effects are improved against a dark or absent background. This object is achieved in that the rod contains a region (5) of an opaque material extending in the longitudinal direction which may optionally be additionally coloured with a dye. <IMAGE>
