Abstract (en)

[origin: US4638943A] The present invention relates to a method and an apparatus for heating a building, room or any like space characterized in that it combines into a unit a hot-water generator constituted by a fan associated with a water-air exchanger with high thermal inertia, a tank for hot water for sanitary purposes and a hot-water generator connected by a feed line and a return line to an exchanger and to a circuit for reheating the hot water stored in the tank.
