Abstract (en)  
[origin: EP0172116A1] 1. A relaxation chair, the seat (3) of which is articulated to the front legs (1), the back-rest (4) is articulated to the seat (3), and the arm-rests (5) are articulated to the back-rest (4), characterized in that the back-rest (4) is articulated to the back legs (2) by a pin (12) movable along a groove (13a) provided in each of the two rear legs (2), and the two arm rests (5) are connected to the tops of the front legs (1) by ratchet systems having several positions, with which it is possible to modify the inclination of the back-rest (4), the modification of its inclination involving, by displacement of the pin (12) in the groove (13a), a change of slope of the seat (3).
