Abstract (en)
[origin: US4687089A] In the stacking chamber (9) of a stacking box (50) for superimposed coins (2, 3), a stack carrier (11) supporting the stacked coins is arranged, the top surface (18) of which is inclined with respect to the horizontal (c). For the stacking of coins, the stack carrier (11) is lowered so that the uppermost (3) of the stacked coins (2, 3) is in each case closely below the upper stacking box rim (19). For issuing coins, the stack carrier (11) is lifted, during which step respectively the uppermost (3) of the coins (2, 3) stacked in an oblique position slides along the coin lying therebelow and downwards over the upper stacking box rim once this uppermost coin has been lifted above this rim.
