Abstract (en)

[origin: US4664005A] A device for automatically dispensing labels from a tape comprises a drive shaft and means for driving the tape intermittently from the drive shaft. These drive means comprise a tape feed shaft and a tape feed gearwheel coupled to this shaft. The device also comprises means for actuating the cutter from the drive shaft when the tape is stopped, in the form of a cutter actuator shaft and a cutter actuator gearwheel coupled to this shaft. A cylindrical drive member is coupled to the drive shaft and at least one toothed sector on the cylindrical drive member meshes with the tape feed and cutter actuator gearwheels in such a way that these gearwheels are driven one after the other.
