Abstract (en)

1. A retractable rotary-knob unit for adjusting the switching or control devices disposed behind a switch panel in domestic appliances such as cookers, washing machines or the like, which comprises a rotary knob (1), a compression spring acting in the axial direction on the rotary knob (1), a sleeve-like sliding member (2) formed on the rotary knob (1), a guide sleeve (3) fitted into the sliding member (2) and having a central socket insert (4), and a closed channel (6) proved at one wall side (5) of the guide sleeve and having a detent position (7) for a sliding pin (9), characterised by the following features : the sliding pin (9) is part of a movably mounted separate holder (10), the holder (10) is provided with a pivot pin (11), the pivot pin (11) is guided for pivoting in a bearing (12) provided in the rotary knob (1), associated with the top of the holder (10) is a spring element (13) which is supported against the inner wall of the sliding member (2) and holds the sliding pin (9) in engagement with the channel (6), the spring element (13) is coupled to the pivot pin (11) of the holder (10).

Abstract (de)

Versenkbare Drehknebel (1) zum Einstellen für die hinter einer Schalterblende angeordneten Schalt- und Regeleinrichtungen in Haushaltsgeräten, wie Herde, Waschmaschinen oder, dgl., der unter der Einwirkung einer in Achsrichtung wirkenden Druckfeder gehalten ist. Der Drehknebel (1) ist bei zusammengedrückter Druckfeder mittels eines in der Raststellung in einer geschlossenen Nutbahn (6) eingerasteten Gleitstiftes (9) in Versenkstellung fixiert. Die Versenkstellung des Drehknels (1) ist durch Antippen des Drehknebels auslösbar, wobei dieser durch Entspannen der Druckfeder in seine Betriebsstellung vor der Schalterblende bringbar ist. Um mechanische Abnutzungen an der Nutbahn (6) zu vermeiden, ist der Gleitstift (9) beweglich gehalten und wird mittels eines Federelementes (13) in die Nutbahn (6) gedrückt
