Abstract (en)

[origin: EP0173988A2] To improve the adhesion between the insert member and the concrete in insert members which are arranged in concrete formworks and remain in the concrete, such as spacers, spreaders, pipes, covering strips and the like, the insert member (K), for example a strip-shaped spacer (1) of plastic, is to be provided at least on part of its surface with a coating (4) which promotes bonding between it and the concrete. Possible coatings are, inter alia, a plastic coat (7; 9) and/or a granular or pulverulent material (8), in particular sand and/or cement. <IMAGE>
