Abstract (en)
[origin: EP0074610B1] 1. A process for the selective extracorporeal precipitation of low density lipoproteins from full serum or plasma for non-therapeutical purposes, characterized in that heparin in a buffer is added to the full serum or plasma and the beta-lipoproteinheparin complex formed is precipitated at the isoelectric point at a pH value of from 5.05 to 5.25 and subsequently separated or the precipitate and/or filtrate is/are further analyzed for diagnostic purposes.
