Abstract (en)

[origin: WO8503869A1] Method of treatment for memory disorders of the elderly comprising administering manganese-containing pharmaceutical preparations in appropriate ratios with isoleucine, methionine, phenylalanine, tyrosine and valine and in appropriate ratios as between the amino acids used to improve the memory of affected individuals; each of these to be given in cumulative amounts appropriate to the individual patient in a schedule of treatment which varies in amount, frequency and said ratios as it reflects the changing degrees of imbalance of the affected individual with adjustments in metabolic balance as it approaches that present when loss of memory developed its first manifestations clinically.
