Abstract (en)
[origin: EP0175073A1] 1. Hood covering for goods wagons and containers, which consists of at least two hoods (1) and a central portal (4), the hoods (1) being formed by two hood parts (2), which can be spread out from a common plane by means of actuating devices arranged in the roof area and in the underframe area and can be moved on a common slide rail (5) arranged at each longitudinal side of the underframe (6), characterised in that actuating levers (15), which can be pivoted in a vertical plane by means of a common drive, are associated with each hood part (2) on the end wall (3) and on the central portal (4), that a guide roller (17), which is permanently connected to a longitudinal guide (18) of the hood part (2), is associated with the actuating lever (15) arranged on the central portal (4), that a guide funnel (21) is associated with the actuating lever (15), arranged on the end wall (3), with a connection lever (16) and can receive the end section (19) of the longitudinal guide (13) via preferably double hemispherical rollers (20), and that, at the beginning of the opening operation, the impact edges (23) of the roof closing profiles (38) have a horizontal area of movement which is equal to or greater than the labyrinth depth (25) and, as the opening operation continues, pass into an ascending area of movement.
