Abstract (en)

A varnish coater for a printed product is provided, wherein a varnish supply pipe (30) from a varnish tank is open at a position above a bucket-like varnish pan (26) for storing varnish (27), overflow means (31, 32) connected between the varnish tank and a varnish drain pipe (33) opens at a predetermined varnish level in the varnish pan (26), and varnish drain port means (35) is formed in a bottom portion of the varnish pan (26) so as to cause the varnish tank to communicate with the varnish drain pipe (33).
