Abstract (en)

Each window regulator has associated therewith at least one relay (5 - 8) connected between the electrical system of the motor vehicle and the motor (M1, M2) of the window regulator in order to control the supply of working energy to the motor. Remote control units (U1, U2) are provided comprising switches (1-4, 11-14) which are each connectible through low power conductors (D1, D2, D3) to the energisation circuit of one of the relays (5-8).
