Abstract (en)

[origin: EP0176486A2] The knife has a cutting blade (1), with one blade end (2) bedded and supported in a synthetic plastics body (3). The body is covered in turn by an elastomer layer (4). The elastomer layer is at least partially interrupted in a front (5) and intermediate (6) region of the handle to leave the body exposed at these places. The body comes out flush to the elastomer layer at these cut-outs which helps to anchor the cladding to the body.
