Abstract (en)
[origin: WO8504369A1] A machine and method for treating a web (12) by longitudinal compressive action, by pressing web (12) against a driven roll (10) to drive it into a treatment cavity bounded by the roll (10), and an overlying surface (28) of primary member (14), followed by application of retarding forces R by extrusion in which the extrusion orifice bounded by surfaces (26) and (28) is arranged with its axis substantially parallel to the roll (10) at the web-drive point, and in which resilient self-adjustment of the extrusion orifice is achieved by employing a blade member (24) parallel to the web which is resiliently urged toward the drive nip.
