Abstract (en)
[origin: EP0176814A1] 1. A container (100, 102, 180) like a bag, pouch, or the like for picking up waste or excrements from a ground surface, where the edge of the opening (104, 106) of the container, at least sectionwise, has a stiffening (124, 126, 188) that can be shaped according to the desired extent and adapted, at least partially, to the ground surface, characterized in that the stiffening (124, 126, 188) is composed of two elastically bendable sections (116, 118; 120, 122) arranged at a distance to each other, being joined with each other by the material of the container or by an adhesive material joining the sections with the container (100, 102, 180) in such a manner as to close the opening (104, 106) of the container if there is no dynamic effect from the outside.
