Abstract (en)
[origin: EP0176862A1] 1. An electrostatic spraying device for applying liquids, in particular lacquers, to the surface of workpieces, where the liquids are supplied to an atomising device and are transported in an electrostatic high-voltage field to the workpiece surface in the form of fine droplets, characterised in that the workpieces (W) are assigned a movement device (B; B') which imparts a periodic translational and/or rotational movement (Tv, Th, R) to the workpieces (W) in the form of a high-frequency oscillation.
