Abstract (en)
[origin: EP0177212A1] A carrier for a motor vehicle clutch release bearing 56, the bearing having a non-rotatable race 57 and a rotatable race 58. The carrier is generally in the form of a sleeve 48 slidably disposed on the periphery of a tubular member surrounding the driveshaft from the clutch to the motor vehicle transmission. The sleeve has a flange terminating in a rim 110 in which the bearing is located e.g. by means of resiliently deflectable members 112. The rim is secured to a dust cover so that the dust cover moves axially with the bearing.
