Abstract (en)

[origin: US4644308A] A variable composition switching device realizable by the assembling of modular elements and including at least one circuit breaker module i.e. switch module and at least one control and/or protection module. The circuit breaker module consists of a case with two opposing junction sides allowing for assembly by juxtaposition of several circuit breaker modules, one assembly side comprising a duct orifice of the thruster of the circuit breaker device and two assembly areas of a control and/or protection module. The control modules include suitable means for activating the thruster.
