Abstract (en)

[origin: EP0177483A2] Form of execution for the construction of high buildings, in particular for skeleton construction, by means of building elements which consist of prefabricated iron- and/or steel-reinforced concrete girders and of prefabricated reinforced concrete columns, which, in the finished state with interposition of the girders, are aligned and firmly connected to one another, each concrete column possessing on at least one end face a recess preferably lined with a bush, into which a connecting element can be inserted; the connecting element consists of two parts and is arranged completely outside the space occupied by the girder; at least some of the girders extend over at least three adjacent concrete columns standing in a row. <IMAGE>
